

The smart elevator choice

After years of success as a commercial elevator manufacturer, Vertechs has answered the call with the ultimate home elevator. The VEU represents the first major change in the home elevator industry in over 50 years. By combining quality components, commercial-grade drive systems, a range of beautiful finishes and a level of safety that is equal to or exceeds the industry standard, the Vertechs VEU clearly is the new definition of what a home elevator should be.

VEU Home Elevator

Trust the Leader

Dedicated to being world class

In less than two decades Vertechs has grown to become the leader in home elevator systems. Trusted by architects, builders and homeowners, Vertechs is known for its innovation, quality, expertise, uncompromising commitment to safety and competitive pricing.

From the thorough manufacturing and testing process we employ; to our detailed installation approach; to the comprehensive service we provide, Vertechs is dedicated to doing everything it takes to be a truly world class elevator company.

Part of a global company

Vertechs has partnered with the world's largest fluitronic elevator company having in excess of 650,000 elevator systems installed worldwide. Through 50 years of continued development, Vertechs has a distinct technological advantage in the marketplace. This advanced technology is at the heart of every Vertechs home elevator.

Innovative Thinking

Employed throughout the design

At Vertechs our team of engineers are always seeking out innovations that will enhance our products. The Vertechs VEU is evidence of that. It is also the only elevator of its kind to come equipped with either a manual accordion gate or fully-automatic doors. Add to that, the VEU requires no additional space to accommodate the controller and drive system as both have been engineered to be strategically placed out of site in-between joists inside the hoist way, freeing up extra space in your home. The VEU is powered by a unique drive system that can utilize either synthetic biodegradable fluid or standard hydraulic fluid and unlike many other home elevators, the VEU is a power miser, not using energy while sitting idle or traveling downward. To extend the green story even further, your elevator is equipped with four recessed, energy-efficient, eco-friendly lights that illuminate automatically when the cab doors open and are kept illuminated during power failures by an emergency backup power system.

A Valuable Addition

Enhance a person's life and their home

The reasons for adding an elevator to a home are many. It might be to provide the homeowner with access to all levels of their home for years to come, despite the onset of health, aging or mobility issues. Perhaps it's to allow someone to transport equipment, furniture or heavy loads from floor to floor. Or, maybe the reason for integrating a residential elevator is to add a distinctive touch and increase the value of the home.

Safety Conscious

Engineered for peace of mind

The Vertechs VEU is manufactured to a level of safety that matches or surpasses even commercial elevator systems. It features an Electronic Absolute Positioning System (E.A.P.S.), a computer system that ensures the elevator stops smoothly and precisely at floor level. If you choose a VEU with automatic sliding doors it will come equipped with infrared motion sensors that prevent the doors from closing when an obstruction is detected. The Vertechs VEU also features commercial-grade controls. There's even an on-board phone. Rest assured, if someone has a Vertechs VEU, they have the safest elevator in the industry.

Manual Gate for Discrete Design

For those who want convenience but also want their elevator to blend seamlessly into their home's décor, a manual gate is the solution. With this option a matching interior door can be installed in front of the elevator threshold. When the door is closed, it looks just like any other doorway to a room in the house.

Why build a dream home only to move out years later because of all those stairs?

By incorporating a Vertechs elevator into the plans, mobility, health or aging issues down the road are not a factor. A multi-level home will remain accessible and livable for life. Even if the budget won't allow for an elevator to be installed now, you can still plan ahead by ensuring the home's design includes stacked closets, which can later transition into an elevator shaft.

Automatic Doors for Class and Convenience

The convenience of being able to open and close the elevator doors with a simple push of a button makes automatic doors the ideal option for people with mobility issues or for those times when the homeowner's arms are full carrying groceries, furniture or other objects.

Want design flexibility?

Accommodate your home design by choosing openings on front only, front and side or front and rear.

All that's required for a Vertechs VEU elevator is a hoistway.

The Vertechs VEU has been designed and engineered so that all of the controls tuck between the joists of hoistway. No need to use up floor space to accommodate bulky equipment.

Finishes

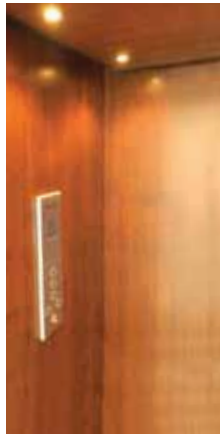

Many rich natural woods to choose from

The engineers at Vertechs believe an elevator should appeal to one’s desire for functionality and aesthetics. With that in mind, the Vertechs VEU is available in oak, our most popular selection, birch, cherry, maple, walnut, mahogany, and teak.

Wall options

Raised wood panel

Wood veneer

Wood finishes (stains shown on oak)

Natural oak

Cherry red mahogany

Fruitwood

Special walnut

Early American

Colonial maple

Golden oak

NOTE: Color samples shown are for reference only. Actual stain results may vary and not match photo exactly. There may be color variations between walls, handrail and doors/gates.

Manual gate

Bronze with smoked acrylic inserts

≥ with wood veneer inserts

Also available with vinyl laminate inserts.

Automatic doors

Wood veneer

Brushed stainless steel

Paintable primer coated

Several finish options are available for both manual and automatic door sills.

Finishing Touches

Distinctive details

Like any other area of a home, it’s the finishing touches that allow the Vertechs VEU to integrate beautifully with a dwelling’s décor. From hall stations, handrails and lighting to operating panels, cab sills and doors, Vertechs provides an inspiring palette of colors, textures and styles to choose from.

Hall stations

Brushed stainless steel is standard, other options are available.

Mirrored stainless with brushed stainless button

Antique with stainless button

Mirrored brass with gold button

Brushed brass with gold button

Cab handrails

Matching handrails are available in various materials and finishes.

Brushed stainless

Solid wood

Black

Cab lighting

Energy efficient, eco-friendly lights.

Brushed steel

Cab operating panel

The panel features an integrated touch phone pad, stop switch and illuminated push buttons.

Available in finishes to match hall stations.

Customer Service and Support

When someone becomes a Vertechs customer, they receive more than an industry-leading elevator—they also receive a company-wide commitment to ensuring their complete satisfaction throughout the life of their elevator. If a customer requires maintenance, repair or has a question or concern, we promise to respond to their inquiry and address their needs promptly and professionally.
